

Confidential Auto Accident Injury Report

"This FREE REPORT You Requested Reveals Little Known Information About Hidden Injuries That Most Doctors And Insurance Companies Will Never Tell You! ... So Before You Speak With Anyone Or Settle Your Case, Read This Entire Report And Discover The Little Known TRUTH About How 'Soft Tissue Injuries' Have Ruined The Lives Of Millions Of Americans Just Like You!"

Keep Reading This Special Report To Find Out How Easy It Is To Protect Your Rights Before It's Too Late. In This Insider's Report, You'll Learn:

- ✓ How to get the information so you know if you have a "Soft Tissue Injury" or not!
 - ✓ Why so many people needlessly suffer from headaches, neck, and back pain!
 - ✓ Why taking pills, or going to physical therapy may never fix your hidden injury.
 - ✓ How to end the pain and suffering right NOW, and FOREVER!
 - ✓ What will likely happen if you don't get natural treatments NOW!
- And much more!

WARNING: "Soft Tissue Injuries" are sneaky, and are potentially debilitating that will strike millions of Americans this year...and as a result, many of them will suffer for the rest of their lives due to misinformation and inappropriate care! That's the bad news.

The GOOD NEWS is that you don't have to continue suffering! Keep reading this report to find out the well-hidden truth you won't find anywhere else!

“Soft Tissue Injury” Authority Says...

“Soft Tissue Injuries Are Often Misunderstood, and difficult to detect. Many victims, who go to doctors due to pain, are told that they will need rest and time. Rest and time alone, can, and usually does create scar tissue and permanent damage.”

Call (760) 777-8377 - NOW - To make an appointment for your FREE consultation (\$80 Value)

Dear Friend,

You know one of the most stressful aspects of living in modern day life is dealing with the problems that arise after an automobile collision.

But were you also aware that automobile accidents **are not** usually ‘accidents’? The word accident implies an incident, which results from some unavoidable circumstance. However, there is almost no example of a truly unavoidable automobile collision. Most collisions occur because of momentary neglect as where a driver takes his/her eyes off the road, or from following too close, or going too fast.

All such collisions are avoidable if people would exercise proper control and not be careless.

Such careless people take from the victims their right to be free from injury; their right to be without pain and disability; their right to be hassle free and to be left alone.

Remember!

A careless driver can strike any person at any time, robbing them of their most basic and important possession: their good health, both physical and mental.

Let’s go back to your accident site immediately after the collision.

Most people state they feel dazed and confused during the aftermath at the collision site.

During this time, if you’re conscious, you begin to realize you have been involved in an ‘accident’.

Our natural human instincts begin to kick into action, and the initial thought process goes something like this:

“Am I Okay?”

“Are my passengers (if any) Okay?”

“What’s the condition of my car?”

And...

“Oh, I wonder if the other person is Okay?”

It’s normal to initially think of our own well being before we think of others.

If any person involved is not suffering from an apparent life threatening injury or appears to have no broken bones or major cuts, then most often an ambulance is not called.

Here’s where the problem begins... the attention immediately begins to shift towards automobile damages, and of course...

WHO IS AT FAULT?

Call (760) 777-8377 - NOW - To make an appointment for your FREE consultation (\$80 Value)

For the time being, your life has not changed. All of your normal daily habits, responsibilities and leisure time have been wiped away by the complications that will be created by this ‘accident’. The prior stresses you might have been dealing with will not compare to the hassles and inconveniences that an automobile accident victim experiences.

Later, the inevitable thought occurs anywhere from one hour to five days after the time of the accident.

“Am I Really Alright?”

Not only are automobile accidents and inconvenience and a hassle, you may have noticed that ever since the accident, **you have not been** feeling like your normal self. You’re experiencing obvious pains and symptoms like

- muscle stiffness
- spasm
- neck pain
- headaches
- numbness and tingling
- mid back pain
- low back pain
- difficulty sleeping
- irritability
- memory loss
- fatigue
- difficulty concentrating
- and many other problems.

Or Worse, You May Be Injured And Feel Nothing At All!

Either way, you might find yourself at the local hospital by either self-admission, or taken by an ambulance.

Let me make this perfectly clear. The emergency room technicians (doctors, nurses, aides, etc.) are trained to detect life-threatening conditions and provide appropriate care as needed.

If your injuries do not fall into this category, then after the evaluation you'll be sent home with pain and sleep medication, anti-inflammation medication and muscle relaxers.

The hospital 'follow-up' has always been interesting to me. Here you have a doctor specializing in acute trauma; broken bones, internal injuries, burns, severe gashes and lacerations, who already diagnosed and released you a week or two ago, wanting you to come back for another evaluation.

Now It Gets Interesting...

During your initial days of taking these 'medi-cocktails', you get a call from an insurance adjuster representing the person who caused the accident. These are highly trained individuals who deal with accident claims all day long. They are calling to get information to settle this case **immediately**. They understand you have been to the hospital and were released. They also understand that **NOW** is the time to settle while you're on all those medications.

Injured people feel less injured under the influence of medications.

It is usually hospital policy **not** to give a second prescription during a follow-up visit. Their job is finished. If you complain of injury, they will recommend you to see your family doctor or general practitioner for your injury.

Welcome to the medical system

The general practitioner is a competent doctor of medicine. However, this type of doctor may not be an expert for the diagnosis and treatment for all soft tissue injuries.

These collisions cause underlying soft tissue injuries that victims may be unaware of, and family doctors may not be able to handle; especially those of the neck and back.

The loop begins when the doctor continues to prescribe all those medications. Despite the effects of the drugs, you still feel injured and simply, not the same person.

As each day goes by, and the injuries continue to be inappropriately treated, the body produces dysfunctional scar tissue at the sites of the injury.

This continued incorrect healing process begins the initial step of future conditions, the most common being Post-Traumatic Osteo-arthritis.

This form of arthritis over time can ruin your posture (Giving you a slumped or hump backed appearance)... It also causes the vertebrae discs in your spine to degenerate and create scar tissue formation leading to chronic stiffness, pain, numbness and spasms.

**Remember, the purpose of medications is to ‘numb the pain’
Not correct the injured problem.**

The next step for the general practitioner will be to refer you to a physical therapist. Since this force from the accident is enough to bend steel and break glass, one would think that there would most likely be a joint injury as well. Physical therapists are very good with rehabilitation, but just don't have that much experience with working with joints and nerves.

If you don't improve within four to eight weeks, then you'll probably be referred out for surgery. When, you may have just needed someone to work with your joints in your spine, legs and arms.

Now the surgeon has a decision to make...

Surgery Or No Surgery?

As a matter of fact...

Current medical research states **most** of all soft tissue injuries occurring from auto accident patients **do not** require surgical intervention.

This brings us to the closure of this medical loop. Since a small fraction of all soft tissue injuries caused by auto accident require the need for surgery, you will likely be told the following...

“There is nothing we can do... You may have to live with this for the rest of your life.”

This is a big mistake. Don't let this happen to you!!!

Oh, and remember the insurance claims adjuster who called you earlier, well, you can expect more calls to your house as soon as they receive your doctor's report.

The claims adjuster's interpretation of these reports is...

“Your doctors are finished, and your pain will eventually go away on its own, so let’s settle this case NOW and put this behind you.”

That’s A Gigantic Mistake! Why?

A lot of auto accident victims receive inappropriate care from hospitals, medical doctors, or physical therapy clinics. Then, while the underlying damages and pain is hidden or numbed with drugs, they settle their case. **Don’t Let This Happen To You!!!**

If you do, you may experience pain, numbness, headaches, muscle stiffness, fatigue, and other problems, including arthritis, for many months and years ahead. Nothing is more important than your health once you start to lose it. So, the big question is...

How Are These Hidden Injuries Detected?

First, when you have been in an auto accident, you need a doctor who is trained and specializes in the biomechanics of the human body. That means he or she can perform routine physical examinations with orthopedic and neurologic tests, as well as special tests that assess those hidden functional soft tissue damages. In addition, special x-rays neurologic can be taken to find out if there has been any structural damage.

As a matter of fact, most general practitioners do not conduct these specific examinations and x-ray analysis methodologies. Without proper training, a doctor can overlook many damaging injuries resulting from a condition called whiplash. Whiplash occurs when the head and neck are thrown or ‘snapped’ back and forth very quickly at speeds as slow, as 5 mph. Whiplash is the most common injury in auto accidents.

“About 20 Million People In The United States Have Suffered Whiplash Damage.”

Your neck is jam-packed with nerves, glands, tubes, blood vessels, lymph nodes, and 48 different joints. Add to that your brain stem, spinal column, discs, muscles, tendons, ligaments, fluids, meninges, and more!

The Chances Of You Becoming A Whiplash Victim In An Accident Are Extremely Good.

In addition to disc and other soft tissue damage, whiplash causes spinal column misalignment and irritation, stretching or impingement to the nerves and spinal curve, which eventually leads to more problems than just pain including altered posture, loss of normal movements, and loss of whole body health and function.

Proper evaluation and treatment by an injury specialist can make the difference between...

True Recovery, Healing And Strength Vs. Lingering Pain, Sickness And Disability

My name is Dr. Naota Hashimoto

I have treated literally hundreds of injury victims just like you. I am well trained in the diagnosis and treatment of auto accident patients.

Call (760) 777-8377 - NOW - To make an appointment for your FREE consultation (\$80 Value)

Q: What if my car sustained only minor damage?

A: Documented studies done by specialists Charles Carroll, M.D., Paul McAtee, M.D., and Lee Riley, M.D. revealed that:

“The amount of damage to the automobile bears little relation to the force applied to the cervical neck (spine) of the occupants.”

In other words, the severity of the injury to the passengers is not necessarily directly related to the damage to the vehicle. Most insurance adjusters love to convince you differently. Be careful!

Q: I definitely feel injured from my accident; however, I have a history of related types of aches and pains, and records of treatment. Does this harm my case?

A: No. This is why you need to see a specialist who is familiar with this circumstance. There is always a reason *why* you may feel injured or differently following an accident. My job is to identify specifically your new injury or the flare-up of an old one.

Q: Do I need an attorney?

A: It is always important to take care of your well being as soon as possible. First priority is to get checked by a doctor and begin, if needed, the appropriate treatment. After that, you will have enough information to decide if you want to hire an attorney or not.

Remember, the responsible party’s insurance company has many attorneys, usually very good ones. You may need all the protection you can get. This can be done before or after treatment. If necessary, we can refer you to a reputable and qualified attorney.

Call (760) 777-8377 - NOW - To make an appointment for your FREE consultation (\$80 Value)

Q: If I need treatment for this injury, do I have to pay for it myself as the treatment is rendered?

A: No. Only in extremely rare circumstances does the patient pay for their care as it is rendered. No matter who is at fault in the accident, you are still entitled to benefits under your car insurance policy. If you have “Med Pay” on your policy, your medical bills will be paid 100% up to a specific amount based on your policy limit. My office manager can assist you in obtaining this information. Using your “Med Pay” **will not** raise your rates. However, if you do not have “Med Pay” on your policy, then we will accept an attorney lien on the case. This allows you to get treatment and then have the bill paid when your case is settled. Again, feel free to call, my office manager can help you with this information.

Q: Does your treatment hurt?

A: Absolutely not. I specialize in advanced care for both children and adults. My therapies are very gentle and quite soothing. Most patients can hardly wait to get their care. Please see the ‘Patients Speak Out’ section.

Q: Is your care safe?

A: Yes, extremely. Particularly when compared to the side effects of prescribed medications and/or surgery.

**N2Health for
Acupuncture & Spinal-Joint Rehabilitation
For Auto Accident Injuries
(301)-645-5390**

If you call my office by A.S.A.P you will receive, **at no cost to you**, a complimentary consultation and physical examination to evaluate any hidden injuries that need to be documented, and if appropriate, begin a course of action to treat the injuries. The test value exceeds \$120.

Simply let my office know you received this special report and would like to take advantage of this opportunity.

Sincerely,

Dr. Naota Hashimoto, DC

P.S. - If you were not alone in the vehicle during the accident, the other person may want to be evaluated also. If there was more than one other person in the vehicle, let our office know and we will be honored to provide the same opportunity for them.

Call (760) 777-8377 - NOW - To make an appointment for your FREE consultation (\$80 Value)

Read What Dr. Hashimoto's Patients Have to Say....

He has done what he said he'd do. He made the pain go away and stay away!

“After being involved in a recent car accident, I suffered from lower back pain, neck pain and shoulder pain for over two months. Because of the pain, I was unable to enjoy fishing, weight lifting, restoring cars, and most other everyday activities. I tried physical therapy, pain pills, and muscle relaxers these results of these treatments were non-conclusive. A friend recommended chiropractic care, once I began Dr. Hashimoto's care; I started feeling better in 1 month. Now I'm able to do nearly everything I used to be able to do. I will continue to visit Dr. Hashimoto for care to try to eliminate all the pain and return to normal. Dr. Hashimoto provides outstanding care and is friendly and understanding. He has done what he said he'd do. He made the pain go away and stay away!”

**M. Meyer
Seattle, WA**

In about two months the problem completely disappeared. I think I felt better than before my accident.

“After a car accident, I had no feeling in my right hand, a stiff neck, and lower back pain. At the same time, I had severe headaches. The pain affected my daily life for about a month and a half. I couldn’t enjoy playing with my kids, sitting for a long period of time, walking a long distance or exercising. Before seeking treatment from Dr. Hashimoto, I took mostly pain pills to try to ease the pain. After the first adjustment, I could feel a difference. I felt much better. In about two months the problem completely disappeared. I think I felt better than before my accident. I can perform my job. I can pick up my son. The headaches and back pain are gone and the feeling in my right arm returned. Dr. Hashimoto’s office staff is friendly and professional. I felt I received good care.”

**J. Proctor-Fenwick
Seattle, WA**

I thought I would have to live with my neck pain and hand weakness forever..

I was pulled over on the side of the road when I was rear ended in May of 2007. I was taken to the hospital and release with some medications for my pain. Days later, I started developing a sharp pain from my neck down to my hands and I was losing strength in my hands. I saw 2 different MD's for this and 3 different Chiropractors and Physical Therapists before I found Dr. Hashimoto. I heard good things about this office, and wanted to give it a shot. Within a few months my neck and arm pain was gone, and my hand strength is 90% returned. I can cook with chop sticks now!"
